Fullstack & distributed systems engineer – architecting cloud-native, large-scale software that ships rapidly and stays maintainable

Education

Florida International University — Miami, FL
Bachelor of Science in Computer Science, GPA: 3.76 — *Jan. 2025 – Apr. 2027*

Miami Dade College — Miami, FL
Associate of Arts in Computer Science, GPA: 3.81 — *June 2023 – Dec. 2024*

- Awards/Honors: ColorStack Vice President at FIU, INIT Exec Board, CodeIn MDC Founder, MLT Fellow, CodePath E3 Program, SharkByte Hackathon Web Lead, Google Developer Group Vice President at FIU
- Relevant Coursework: C++ Programming, Java Programming 2, Discrete Mathematics, Statistical Methods, Data Structures & Algorithms, Programming Languages, Systems Programming, Computer Architecture, Deep Learning, Blockchain Technology

Experience

Software Engineer Intern (Returning) — May 2026 – Aug. 2026
NVIDIA — *Santa Clara, CA*

- Owned testing strategy across multiple NGC cloud repos – authored unit, integration, E2E, and visual regression (VRT) suites to harden release confidence and cut regressions across our frontend surface
- Built a scalable, standardized scaffold for spinning up new NGC apps, accelerating fullstack delivery across the team and enforcing shared patterns out of the box
- Drove a multi-repo effort spanning cloud infrastructure (AWS), backend services (Spring Boot), and frontend (Next.js) to align tooling, CI gates, and deployment paths

Software Engineer Intern — May 2025 – Aug. 2025
NVIDIA — *Santa Clara, CA*

- Shipped frontend features across 14+ NGC repos in Next.js, TypeScript, and Tailwind, partnering with infra and backend teams to land changes end-to-end
- Rolled out Flox across the frontend NGC repos alongside companion CI/CD jobs and Kubernetes updates, keeping local, pipeline, and deploy environments in sync
- Designed and stood up a pre-staging 'dev' environment for local and CI/CD use within NGC, unblocking iteration speed and tightening the path from commit to deploy

Software & AI Contributor — Sept. 2025 – Present
CodeCrunch — *Remote*

- Lead fullstack development on CodeCrunch's new web applications (Next.js, Node.js/Express) and iOS mobile app, partnering with Brian Bazurto (10K+ LinkedIn) on client engagements end-to-end
- Architect agentic AI workflows for client research automation and marketing, productionizing repeatable pipelines clients can run on demand

CodePath Tech Fellow — May 2024 – Present
CodePath — *Miami, FL*

- Completed 30 weeks of intensive team-based training in DSA & full-stack web development
- Led peer sessions and mentored students through advanced DSA patterns and interview prep
- Led a team of 3 to ship Errorly, a full-stack app, owning GitHub Issues, branching strategy, and code reviews

Advanced Web Dev Team Member — Oct. 2024 – Dec. 2024
INIT Build Program — *Miami, FL*

- Shipped Ducky Pics, a full-stack app, with a team of 4 in 9 weeks from spec to deploy
- Built Google OAuth + email-code verification end-to-end and hardened the auth surface
- Owned frontend components and secure FastAPI backend routes with full error handling

Projects

CentPoll | *Next.js, Node.js, Postgres, WebSocket, AWS, OpenAI, Twilio, Vapi, Stripe* — 2026

- Co-founded CentPoll.com, a political polling startup, with Lester Tellez (53K+ YouTube subs); onboarding multiple pollsters waiting on the platform
- Architected a pay-per-completion polling pipeline: survey builder, voter targeting from an L2-style file, multi-channel delivery (SMS / voice / IVR / web), and a live WebSocket dashboard streaming completions
- Wired OpenAI, Twilio, Vapi + ElevenLabs, Stripe, Supabase pgvector (RAG), and AWS S3 + CloudFront; built multi-tenant workspaces, JWT sliding-refresh auth, and weighted analytics via iterative proportional fitting (raking)

PokerXYZ.io | *Next.js, TypeScript, Tailwind CSS, Node.js, WebSockets* — 2026

- Built a multiplayer web poker game at pokerxyz.io with public sprite sheets, custom SVG assets, and a fully responsive UI
- Owned the Node.js backend and WebSocket layer powering live game actions, chat, and rooms across Texas Hold'em rule sets

Poker Robot | *Next.js, TypeScript, Flask, Arduino, CAD, Computer Vision* — 2026

- Designed and built a custom poker robot capable of shuffling, rigging, and dealing physical cards
- Ran an NVIDIA Jetson Orin Nano as the on-device server bridging the frontend and Arduino serial control
- Implemented computer vision for rigged shuffles and per-player card dealing

SharkByte Hackathon | *Next.js, TypeScript, Tailwind CSS* — 2025

- Led full website development for SharkByte, a 300-person hackathon at Miami Dade College, owning frontend architecture and event branding
- Helped organize the event end-to-end alongside the MDC organizing team

Practical Synth Theme | *VS Code Extension* — 2024

- Authored and published a custom VS Code theme with 2000+ installs on the Marketplace

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, C++, SQL
Frameworks: Next.js, React.js, Express.js, Node.js, FastAPI, Java Spring Boot, Flask
Libraries: Tailwind CSS, Shadcn, Bootstrap, Redux, Zustand, Prisma, GSAP
Databases & Storage: PostgreSQL, MongoDB, DynamoDB, Redis, Supabase, pgvector, Vector Embeddings, AWS S3, AWS RDS, Railway
AI & Integrations: OpenAI, Agentic AI, MCPs, RAG, AI Image/Video Generation, LoRA Fine-tuning, ElevenLabs, Vapi, Twilio (SMS/Voice), Stripe, Resend
DevOps & Cloud: Docker, Kubernetes, Terraform, IaC, GitLab CI/CD, AWS (EC2, ECS, EKS, RDS, S3, CloudFront, Route 53, IAM, VPC, WAF), Cloudflare, CDN, GCP (Agent Development Kit / ADK, persistent agentic AI systems), Vercel, VMs, Shell Scripting, Automations, DNS
Testing & Tools: Jest, Vitest, Playwright, Cypress, Visual Regression Testing (VRT), Postman, OpenAPI, Kubb, SonarQube, Git, GitLab, UI/UX, Figma
